# ERP Studio

---

## Innovate. Elevate.

Not until now has Enterprise Resource Planning (ERP) been created with small and medium-sized businesses in mind. ERP Studio gives the same resources to the user in a few simple functions to achieve attainable goals.

ERP Studio is a web-based, scalable and customizable business software that serves as a 'plug-and-play utility, with seamless integration into new or existing business for future business.

Within the program, the supply chain and scheduling options are the base to automate business processes from paper to electronic or grow existing automation.

Beyond routine daily functioning, ERP Studio gives the user the ability to see real-time reporting at any step in the business cycle or process as well as past histories and activity reports.

ERP Studio is simple and easy to use with little start up time and with multiple capabilities.

ERP Studio can be customizable beyond the basic system and can be designed to match specific, current business practices, specifications and styles.

The answer to small and medium-sized business is ERP Studio. Innovate. Elevate.

## What's in ERP Studio?

---

The strength of ERP Studio is the flexibility it offers.

From first-time technology users to those looking to expand, ERP accommodates potential growth.

ERP Studio offers the basic functioning of supply chain and financials management and can include security.

Beyond the basic package, ERP Studio can grow to include a design functionality to make, for example, stylistic and branding changes.

At its capacity, ERP Studio can be scaled further to include the ability to reformat business functionality and process matrices. ERP Studio can then become customizable to perform in ways suitable to any individual company in its own style.

## How useable is ERP Studio?

---

ERP Studio is designed to be 'plug-and play' software, making its implementation into existing businesses as seamless as possible.

The modules have been created with easy-flow and direct work functionality as its core.

## Why ERP Studio?

---

ERP Studio has been created with the greatest of sensitivities to the challenges of small and medium-sized businesses, including those struggling without automation.

ERP Studio covers a large number of business capacities such as sales tracking, purchasing, inventory and scheduling as needed.

Beyond functionality, ERP Studio has the ability to generate reports, as to retrieve and analyze data in real-time and to communicate information to customers and suppliers easily.

Automated data makes information traceable, viewable, maneuverable and reportable at a moment's notice.

Data analysis and number crunching is a big part of today's competitive marketplace. ERP Studio can not only view information in its current state or real-time, but can also from a historical perspective from past business initiatives.

ERP Studio also serves as a database for various business contact categories and links that information with business flow applications for complete report capability.

ERP Studio is also scalable. If basic functionality is no longer serviceable, an addition design component can be added to extend customizable applications to implement new business functionalities and processes.

But the greatest benefit to ERP Studio is the price. Its availability to the user looking to start or expand business but not at an enterprise level, can automate affordably with all the opportunity to grow.
